Patent Pending Water Softener and Sulfur (Hydrogen Sulfide) Removal System

Licensed, Insured and Bonded

Other Professionally Installed Water Systems

- Is your water softener working the way it should?
- Are you getting blue-green stains again because your acid neutralizer needs to be filled?
- Tired of putting up with poor water pressure because somebody told you ".....you're on a well system"?
- Getting brown or black stains that you didn't have before on plumbing fixtures and don't know what to do?
- Need to have the bulb in your ultraviolet light replaced or the quartz sleeve cleaned for optimum efficiency?
- Does your water have a bad taste or sulfur (rotten egg) smell that you don't like?
- Need some filters changed or have some other maintenance issue?

It's not uncommon for us to get calls from customers who are looking for answers to questions like these or have just unplugged their system and put it in bypass because ".....the whole thing is just too much trouble! We can't get anyone to call us back from the company we bought it from — let alone service it, and then when we do find a company that works on the stuff all they say is that it can't be fixed — we need to get a new one!" The truth is that most of the time the system

only needs some minor repairs and a more experienced technician to service it. In the event that your system can't be fixed, is just worn out, too small, or maybe it's possible your water has gotten worse or has changed (increased straining, poor water pressure, bad taste or smell) — we will professionally install the right equipment at the right price. We have 100% Performance Guarantee and a full one year parts and labor warranty on new installations. We are proud of the work we do and have the pictures to prove it — new ones will be added as we improve our web site.

Service on **Culligan**[®], **Ecowater**[®], **Rainsoft**[®], **Kinetico**[®] and other conditioning systems installed by plumbing companies. Large **Culligan**[®] system we service in Derwood, MD 20855.

Standard water softening system with pre-filtration and **Sterilight**[®] ultraviolet light for hard water, sediment and bacteria problems in Fairplay, MD 21733.

Acid Neutralizer to prevent green staining of fixtures and corrosion of copper piping. This system has a post filter for taste and odor. Installed in Ijamsville, MD 21754.

EcoSoft Water Treatment Systems™ Water Softener and **Stenner®** peristaltic chemical feed pump system treating hard water conditions and sulfur (rotten egg) smell in Berkeley Springs, WV 25411.

Heavy Duty Acid Neutralizer and Depth Filter with Water Softener and Carbon Filtration for petroleum byproducts. Installed in Mt. Airy, MD 21771.

This customer called us because their 15 year old Bruner 1.5 cubic foot acid neutralizer had stopped backwashing and was not working. They found out that parts and supplies for all Bruner models have long disappeared. They were also experiencing lower and lower water pressure and knew that they had to do something soon. They saw pictures online of our standard 2.5 cubic foot **EcoSoft Water Treatment Systems™** automatic acid neutralizer with whole house Big Blue GAC (carbon) postfilter for bad taste and odor – and got a new one professionally installed. Another very satisfied customer in Gaithersburg, MD 20882.

Don't give up on your old water softener until you get Mr. Water™ Professional Water Treatment a chance to look at it! This customer was sure that his 20 year old Autotrol water softener was done until it was discovered that it only needed some minor repairs and a salt refill. Repaired for a pleasantly surprised customer in Bowie, MD 20716.

This water conditioning system was installed by American Water Technologies using Autotrol 155 and 255 control valves about 16 years ago. The system is still working fine, but the company has gone out of business and we have taken over the servicing of this and many other systems installed by them. This water softener and acid neutralizer are in Laytonsville, MD 20882.

This customer with hard water (calcium and magnesium) problems found us locally on the internet and had us give him a quote. He explained to the service tech that he was

Compare the systems Mr. Water™ Professional Water Treatment sells and expertly installs to any of our competitors, and we feel confident you will decide to do

impressed with how we showed pictures of equipment installed in the homes of our customers, how we build the systems, and the heavy duty components we use. These customers in Boonsboro, MD 21713 now have the soft and great tasting water they always wanted.

just what this customer did. This customer wanted to replace an old chemical feed pump system; the problematic system injected sodium hydroxide into the water to correct his acid water problem. We explained to him that sodium hydroxide is really oven cleaner (lye) and it can be extremely dangerous if the system fails to meter the solution properly or it jams in the "on" position. Although this situation fortunately had not happened to him, it could – so why replace it with another such system. Besides that, why would anyone want to drink oven cleaner! He smartly decided to spend a little more money for the proper equipment and decided against the other estimates for another feed pump system. This system is our standard **EcoSoft Water Treatment Systems™** 2.5 cubic foot acid neutralizer, 32,000 grain electronic demand water softener and GAC (carbon) postfilter; we also reinstalled his existing ultraviolet light for a small additional fee. Installed for an educated consumer in Woodbine, MD 21797.

This customer bought a foreclosed home and walked into some real water problems. The water coming out of their sinks was a brownish red (a sign of ferric iron) and it had stained the sinks and toilets quite considerably. They could not do laundry or use their new dishwasher and the water had a rusty taste and smell. We installed our standard combo system for this water problem – a Heavy Duty **EcoSoft Water Treatment Systems™** 2.5 cubic foot acid neutralizer and iron filter and **EcoSoft Water Treatment Systems™** 32,000 grain electronic demand water softener with GAC (carbon) postfilter for bad taste and odor. They contacted Mr. Water™ via email at info@ifixh2o.com, and got their irony water problems fixed in Keedysville, MD 21756.
